

OLA Ride Analytics Dashboard

Project Report

Prepared By

Arpit Gupta

Data Analyst Portfolio Project
June 2026

Tools Used

- Microsoft Excel
 - PostgreSQL
 - Power BI
-

1. Project Overview

The OLA Ride Analytics Dashboard project was developed to analyze ride booking data and extract meaningful business insights using data analytics tools. The project involved data preparation, SQL-based analysis, and dashboard development to understand booking trends, revenue performance, customer behavior, vehicle utilization, ratings, and ride cancellations.

The analysis was performed using a dataset containing ride booking information for OLA services. The final output was presented through an interactive Power BI dashboard consisting of multiple analytical views.

2. Project Objectives

The primary objectives of this project were:

- Analyze ride booking trends over time.
 - Understand booking success and cancellation patterns.
 - Evaluate vehicle category performance.
 - Analyze revenue generated through different payment methods.
 - Identify high-value customers.
 - Compare customer and driver ratings.
 - Visualize business insights using an interactive dashboard.
-

3. Dataset Description

The dataset contains ride booking information with operational and customer-related details.

Dataset Information

- Total Records: 103,024
- Total Columns: 19
- File Formats Used: Excel (.xlsx) and CSV (.csv)

Major Columns

- Date
 - Time
 - Booking ID
 - Booking Status
 - Customer ID
 - Vehicle Type
 - Pickup Location
 - Drop Location
 - V_TAT
 - C_TAT
 - Cancelled Rides by Customer
 - Cancelled Rides by Driver
 - Incomplete Rides
 - Incomplete Ride Reason
 - Booking Value
 - Payment Method
 - Ride Distance
 - Driver Ratings
 - Customer Ratings
-

4. Data Preparation

Before analysis, the dataset was reviewed in Microsoft Excel.

Data Cleaning Activities

- Checked dataset structure and records.
- Removed duplicate entries.
- Verified consistency of data fields.
- Prepared the dataset for PostgreSQL import.
- Converted the dataset into CSV format for database analysis.

After cleaning, the dataset was imported into PostgreSQL for SQL-based analysis and later connected to Power BI for dashboard creation.

5. SQL Analysis

PostgreSQL was used to answer important business questions and generate analytical outputs.

SQL Questions Solved

1. Retrieve all successful bookings.
2. Find the average ride distance for each vehicle type.
3. Calculate the total number of rides cancelled by customers.
4. Identify the top 5 customers with the highest number of bookings.
5. Calculate rides cancelled by drivers due to personal and car-related issues.
6. Find maximum and minimum driver ratings for Prime Sedan rides.
7. Retrieve rides where payment was made using UPI.
8. Calculate average customer ratings for each vehicle type.
9. Calculate total booking value of successfully completed rides.
10. List incomplete rides along with their reasons.

SQL Skills Demonstrated

- SELECT Statements
 - WHERE Clause
 - Aggregate Functions
 - GROUP BY
 - ORDER BY
 - LIMIT
 - Data Filtering
 - Business Query Analysis
-

6. Power BI Dashboard Development

An interactive Power BI dashboard was developed to visualize business insights and make the data easier to understand.

The dashboard consists of three analytical pages.

Page 1: Overview & Volume Analysis

This page provides an overall view of ride activity.

Visualizations Included

- Total Rides KPI
- Total Revenue KPI
- Ride Volume Over Time
- Booking Status Breakdown
- Ride Distance Distribution Per Day

Key Observations

- More than 103,000 ride records were analyzed.
 - Total revenue exceeded 35 million.
 - Successful bookings represented the majority of ride activity.
 - Ride volume remained relatively consistent throughout the month.
-

Page 2: Vehicle & Revenue Analysis

This page focuses on vehicle performance and revenue generation.

Visualizations Included

- Top 5 Vehicle Types by Ride Distance
- Top 5 Customers by Total Booking Value
- Revenue by Payment Method
- Revenue KPIs

Key Observations

- Prime Sedan generated the highest ride distance among vehicle categories.
 - Revenue was distributed across multiple payment methods.
 - A small group of customers contributed significantly to booking value.
-

Page 3: Ratings & Cancellations

This page analyzes customer satisfaction and ride cancellations.

Visualizations Included

- Average Customer Rating
- Average Driver Rating
- Cancellation Rate
- Customer Cancellation Reasons
- Driver Cancellation Reasons
- Customer vs Driver Ratings

Key Observations

- Average customer and driver ratings remained around 4.0.
- Cancellation analysis highlighted operational challenges.

- Driver-related and customer-related factors both contributed to ride cancellations.
 - Ratings showed consistency across vehicle categories.
-

7. Business Insights

The analysis generated several useful business insights:

- Booking success rate was significantly higher than cancellation rates.
 - Prime Sedan emerged as one of the strongest-performing vehicle categories.
 - Revenue performance can be monitored effectively through payment method analysis.
 - Customer and driver ratings provide useful indicators of service quality.
 - Cancellation reasons help identify areas requiring operational improvement.
 - High-value customers can be identified for customer retention initiatives.
-

8. Skills Demonstrated

This project helped demonstrate practical data analytics skills, including:

Excel

- Data Cleaning
- Duplicate Removal
- Dataset Preparation

PostgreSQL

- Data Querying
- Aggregation
- Business Analysis
- Data Filtering

Power BI

- Data Modeling
- Dashboard Design
- KPI Development
- Data Visualization
- Interactive Reporting

Analytics Skills

- Data Cleaning
- Exploratory Data Analysis
- Business Insight Generation
- Dashboard Development

- Data Visualization
-

9. Conclusion

The OLA Ride Analytics Dashboard project demonstrates the complete workflow of a data analytics project, including data preparation, SQL analysis, and dashboard development.

Using Excel, PostgreSQL, and Power BI, the project successfully transformed raw ride booking data into meaningful business insights. The dashboard provides a clear view of booking performance, revenue trends, customer behavior, ratings, and ride cancellations, enabling data-driven decision-making.

This project strengthened practical skills in data analysis, SQL querying, dashboard development, and business reporting.
